

The new SRX Telescopic volleyball system

1654055

The new SRX (Spring Regulated eXchange) Telescopic volleyball system allows perfect net tension under all circumstances and offers extra support during ball impacts. In combination with the new spindle and cable grip, the net can be put under tension in no time. The perfect net tension can be achieved by matching the markings on the net tension display. Lightweight aluminum profiles offer ease of use and the reinforced aluminum core ensures optimal rigidity. The net height indications for men and woman volleyball allow fast and easy net height switches without measuring or marking yourself.
